

ASSEMBLED BINDER

Vehicle and Machine Logbook Binder

Service records for everything with an engine, assembled into one binder with a divider per machine.

70

free sheets, in order

6

numbered sections

3

worked examples

10

machine dividers

ONE SQUARE PER SHEET

01	Vehicles		15
02	Garden and outdoor machines		15
03	Trailers, caravans and boats		16
04	Buying and selling		14
05	Running costs		5
06	Home workshop		5

Underlined: the sheets that also come as a worked example.

Notes

This page is intentionally blank.

One divider per engine

How to set this binder up so that every vehicle and machine keeps its records behind its own divider.

YOU WILL NEED

- | | |
|---|--|
| ☐ A 3-ring binder for 142 sheets, with room to grow. | ☐ Scissors, for the labels and cards. |
| ☐ A hole punch to match the rings. | ☐ The handbook for each machine. |
| ☐ Card for the dividers, if you have it. | |

STEP BY STEP in this order

1 Print and punch.

Print the binder file single-sided at 100% ("Actual size", not "Fit to page"), or hand the print-shop file and its note to a print shop. Every page sits about 4 mm away from the punched edge, so the holes clear the tables.

2 Write one machine on each divider.

The ten machine dividers (M1 to M10, from page 130) each have a name line at the top: the car, the mower, the chainsaw, and so on. Write the same names on the machine index (page 5), so the binder can be searched by name.

3 Put each machine's sheets behind its divider.

Behind each divider goes that machine's service log and its pre-use check. The small engine service log (OM-06, page 38) suits any engine without a sheet of its own, and the refill pack holds nine more copies of it, one for each machine divider.

4 Copy the details from each handbook.

Model, serial number, and the parts and fluids it takes go on the vehicle information sheet (VE-10, page 11) or at the top of the machine's log. The binder never supplies these figures: they come from your handbook.

5 Pin up the wall checks.

The four pre-use checks come again in a separate file, enlarged to 11 x 17 in (US Tabloid). Pin each one up beside the vehicle or trailer it belongs to.

6 Cut out the glovebox cards.

One card per vehicle (page 142). Copy the figures from the handbook and the labels on the vehicle, and keep the card in the glovebox.

7 Keep it going.

When a log fills up, file its spare from the refill pack straight behind it: the page it goes behind is printed at the top of each spare. Any page can be printed again from this file.

WORKED EXAMPLES

Pages 6–9 show three of these sheets filled in with illustrative entries: a small engine log, a vehicle service record and a pre-purchase inspection. They are not a real vehicle, the model and part numbers are made up, and they contain no service intervals: those come from your handbook.

Every blank sheet in this binder is one of the free sheets on the Upkeep Papers website, unchanged. The binder adds the order, the dividers, the index, this guide, the worked examples, the labels and the refill pack.

This page is intentionally blank.

Contents

70 free sheets in 6 numbered sections, with the pages that make them a binder. Page numbers are binder pages: each one is printed on its page.

No.	Section	Sheets	Pages	Page
	Start here: one divider per engine			2
	Contents			3
	Index of every sheet, A to Z			4
	Machine index: your names for the ten machine dividers			5
	Worked examples: 3 sheets filled in with illustrative entries			6
01	Vehicles Cars, vans, motorbikes, bicycles and motorhomes: service, tyres, fluids and history.	15	26	10
02	Garden and outdoor machines Mowers, saws, trimmers, generators, compressors, tractors and their winter storage.	15	23	37
03	Trailers, caravans and boats Trailer servicing, caravan checks, outboards, hulls, moorings and safety gear.	16	29	61
04	Buying and selling Viewings, inspections, test drives, paperwork checks and the handover.	14	25	91
05	Running costs Fuel, mileage, charging, tolls and parking, and hire or loan.	5	5	117
06	Home workshop Tools, workshop equipment, ladders, loans and consumables.	5	6	123
M1–10	Machine dividers M1 to M10, to write on			130
	Cut-out pages: spine labels, front labels, glovebox cards			140

In separate files: the refill pack: 31 spare blanks of the logs (41 pages); the four pre-use checks enlarged for the workshop wall; the dividers again, to print on card; a duplex print-shop file, with a note for the print shop; the set-up guide on its own; one fillable PDF per section, every field named separately.

Index of every sheet

A to Z by title, with the code printed at the top left of each sheet, its section and the binder page it starts on (printed at the top of the page).

Machine index

Write each vehicle or machine here and on the name line of its divider, so its records can be found by name. One divider per engine; the trailer and the boat can have one each too.

Divider	Vehicle or machine	Make and model	Registration or serial	Page
M1				130
M2				131
M3				132
M4				133
M5				134
M6				135
M7				136
M8				137
M9				138
M10				139

WHERE THE SHEETS GO

Behind each machine divider: that machine's service log, its pre-use check if it has one, and its repair records. Sheets for things you own only one of can stay in their numbered section.

This page is intentionally blank.

OM-06

Upkeep Papers

Small Engine Service Log

Give every small machine in the shed the same maintenance record, using one sheet per machine.

A general service log for any small four-stroke engine — tiller, chipper, log splitter, water pump, cement mixer, strimmer or anything else with a pull cord.

VE-01

Upkeep Papers

Vehicle Service Record

Keep a service history in your own hands, so it survives changing garages and is there when you sell.

A complete service history for a car or van, kept independently of any garage's system. A documented history is worth real money at resale and is the first thing a buyer asks for.

MILEAGE EVERY TIME

Record the odometer reading every time, and keep the invoices. A service history is a chain of dated mileage readings — a gap in the chain is what makes a buyer nervous.

Used Car Pre-Purchase Inspection Sheet

Carry out the same inspection on every car you view, so a decision made in somebody's driveway is based on what you saw rather than what you remember.

One sheet per car, filled in on the driveway while you are standing in front of it. Print one per viewing and lay them side by side afterwards, when nobody is watching you decide.

WHAT THIS SHEET IS, AND IS NOT

This is a buyer's own walk-round, not a professional inspection. It exists because people forget checks when a stranger is standing beside them — anything expensive is still worth paying an independent inspector to look at before money changes hands.

Make and model Small hatchback, diesel (example)	Registration EXAMPLE 2	Year 2016	Date viewed 11 May 2024
VIN / chassis number Matches the registration document	Engine and gearbox 1.6 diesel, manual	Colour Grey	Advert reference Local listing 4471

PRICE, MILEAGE AND HISTORY the numbers to settle before you look at the car

Asking price	Mileage on the clock 98,400	Mileage at the last stamp 96,950	Former keepers 2
Seller — name and town Private seller, next town	Private or trade Private	Phone	Do the mileages agree? Yes, with the invoices

DOCUMENTS SEEN tick only what you have actually held in your hand

☒ Registration document — seller's name and address	☒ Roadworthiness certificate, and when it expires
☒ Service book stamps, dates and mileages in order	☒ Both keys, locking nut key and handbook
☒ Invoices for the work the advert claims	☒ Finance, write-off and identity checks done

COLD START ask for the engine to be stone cold when you arrive

☒ Bonnet cold to the hand before the key is turned	Cold when we arrived
☒ Smoke on start-up — colour, and whether it clears	A brief white puff, then clear
☒ Noises from cold: rattle, tap, whine, chain	None heard
☒ Idle steady, or hunting and dropping	Steady
Warning lights with the ignition on, before starting All came on	Still lit once it has started None

Vehicle Information Sheet

Fill in once the details you are asked for by a garage, an insurer, a parts counter or a hire firm and can never find.

Everything about one vehicle on one page — the details you are always asked for and never have to hand.

FILL IT IN ONCE, FROM YOUR OWN DOCUMENTS

Insurance, a garage, a hire firm and the police all ask for different pieces of this. Fill it in once. No intervals, capacities or specifications are printed — every figure here comes off your own handbook, plate or documents.

Vehicle _____ Registration _____ Kept at _____

THE VEHICLE

Make	Model	Year	Colour	Body type
_____	_____	_____	_____	_____
VIN or chassis	Engine number	Engine size	Fuel

SERVICE HISTORY

Date	Mileage	Service type	Work & parts	Garage	Cost

This page is intentionally blank.

Vehicle Maintenance Schedule Planner

Translate intervals into due mileages, so servicing is planned rather than remembered.

A planning sheet that turns your vehicle's service intervals into actual mileages, so you know what falls due next rather than guessing.

HOW TO USE THIS SHEET

- 1 Take the intervals from your own handbook — they vary enormously between models, engines and duty cycles. We deliberately do not print manufacturer schedules.
- 2 Write the interval, then the mileage it next falls due at, and update it each time.
- 3 Anything that has both a mileage and a time limit falls due at whichever comes first.

Vehicle		Registration		Current mileage		
Item	Interval (miles/km)	Or time	Last done — date	At mileage	Next due at	Done
oil, filters, belts...						

[illegible]

Notes and anything specific to yours

This page is intentionally blank.

Tyre and Brake Record

See wear as a trend, so you can plan replacement instead of being told at a test that it is already too late.

Tread depths, pressures, rotations and brake wear over time. A single measurement tells you little; a series tells you when to buy.

Vehicle

Registration

Tyre size

Recommended pressures F / R

Loaded pressures

Wheel nut torque

TYRE RECORD

Date	Mileage	FL	FR	RL	RR	Spare	Rotated / balanced / replaced

Vehicle Fluids and Parts Reference

Stop looking up the same specifications every time.

Your vehicle's fluids, filters, bulbs and torque figures on one page. Fill it in once from the handbook and keep it in the glovebox.

FROM YOUR HANDBOOK, NOT OURS

Copy these from your own handbook or the manufacturer's data for your exact engine and build year. Figures differ between variants of the same model, which is exactly why a generic chart is no use and this sheet is blank.

Vehicle

Registration

Engine / variant

FLUIDS

Headlight bulb	Sidelight	Indicator	Brake / tail
Wiper blade sizes	Battery type & size		Key fob battery

Rebuilt Service History Sheet

Turn 'the folder is gone' into a document a buyer can actually read, by working through where evidence still exists and writing down only what you can show.

For a vehicle whose service paperwork has gone missing — reconstructing what can honestly be shown, from whatever evidence still exists, before it goes up for sale.

ONLY WRITE DOWN WHAT YOU CAN EVIDENCE

Do not guess a date or invent a receipt to fill a gap. A rebuilt history is only worth having if every line on it can be trusted, and an honest gap is worth more than a confident guess. Where you cannot evidence something, say so in the notes column rather than leaving the row out altogether.

Vehicle make & model	Registration	VIN / chassis no.
Mileage now	Date you started rebuilding this	Previous keepers, if known

WHERE TO LOOK work through these before writing anything down

- ☐ Ask the last garage or dealer that worked on it for a duplicate invoice
- ☐ Check bank and card statements for garage and parts payments
- ☐ Look for your national test or inspection history, where one exists — it often carries a mileage trail even with no service detail
- ☐ Ask a previous keeper whether they kept anything
- ☐ Check for a warranty registration or a manufacturer app account
- ☐ Go through the vehicle's own paperwork wallet and the glovebox again

REBUILT HISTORY one row per job you can evidence — leave mileage blank rather than guess it

Date / approx.	Mileage	Work done	Evidence found	Confidence	Notes / gap
exact, or 'approx spr...	if known		invoice, statement, previous kee...	certain / approxim...	

This page is intentionally blank.

Auto Repair Estimate Form

Put the price in writing before the work starts, which is what prevents most garage disputes.

A written estimate for vehicle work — parts, labour and what is not included — before the job starts.

AGREED BEFORE THE SPANNERS COME OUT

An estimate given in writing before work starts is the single thing that prevents most garage disputes. No labour rate, parts mark-up or tax rate is printed here; they are yours to enter, and the customer should see them.

Vehicle Maintenance Request Form

Give a fault reported in passing somewhere to land, with a dated record of when it was raised, who received it and what happened next.

A place for anyone driving a shared, family or work vehicle to report a fault or concern, and for whoever looks after it to record what was done about it — so a report does not just stay as something said in passing.

A RECORD OF WHAT YOU WERE TOLD, NOT A SAFETY ASSESSMENT

This records what was reported and what was found. It does not assess roadworthiness or set any safety standard. If a fault affects safe driving, say so plainly in the urgency column and act on it directly — do not wait for the form to be seen.

Fleet / household name

Vehicle(s) covered

FAULT REPORTS

Daily Vehicle Check and Driver Log

Record the check before driving and the journeys after it on one sheet per day.

The walk-round check before driving and the journeys made after it, on one sheet per day.

CHECK FIRST, THEN DRIVE

Two records that belong together: what you found when you looked at the vehicle, and where it then went. What a driver is legally required to check and record depends on the vehicle and the country — the check items are blank for you to write in your own.

Vehicle _____ Registration _____ Driver _____ Date _____ Start odometer _____

Motorcycle Maintenance Log

Track the consumables that move fast on a bike — chain, tyres and pads — between the services that happen once a year.

Service record and pre-ride checks for a motorcycle, including chain, tyre and brake wear, which move fast enough to be worth tracking between services.

Make & model	Registration	Year
VIN	Engine no.	

SPECIFICATIONS

Engine oil & qty	Oil filter	Plugs & gap
Chain size & links	Chain slack	Sprockets F / R
Tyre sizes F / R	Pressures F / R	Brake fluid

SERVICE RECORD

Date	Mileage	Oil & filter	Chain	Brakes	Tyres	Other work	By

☐ Tyre pressures and tread	☐ Lights, indicators and horn
☐ Chain tension and lubrication	☐ Engine oil level
☐ Brake lever and pedal feel	☐ Coolant level
☐ Brake fluid levels	☐ Fasteners and fairing fixings

Bicycle Service and Maintenance Log

Track servicing against distance and record chain wear, which is what decides whether a cheap chain change becomes an expensive cassette.

Servicing by distance rather than by date, with the component life that decides when a chain becomes an expensive cassette.

YOUR FIGURES IN THE REFERENCE BLOCK

No service intervals or wear limits are printed here. They depend on the bike, the conditions and the rider, and your manufacturer's figures are the ones to use. Write them in the reference block so they are on the sheet where the work is recorded.

Bike

Make and model

Insurance or registration

Motorhome and Caravan Maintenance Checklist

Cover the habitation side properly, which is where the expensive problems — damp above all — actually start.

Seasonal and habitation maintenance for a motorhome, campervan or caravan — the parts that are a house rather than a vehicle.

Vehicle / van	Registration	Year
Chassis no.	Habitation check due	Damp check due

WATER AND GAS

☐ Fresh water tank drained, sanitised and refilled	
☐ Waste tank flushed and drain valves working	
☐ Water pump and filter checked	
☐ Gas bottles secure; regulator and hoses in date	
☐ Gas appliances lit and burning cleanly	
☐ Carbon monoxide alarm tested	

BODY AND DAMP

☐ All external seals and joints checked for cracking	
☐ Damp meter readings taken at corners and lockers	
☐ Roof lights, vents and aerial seals sound	
☐ Windows and doors sealing; locks working	
☐ Underside and wheel arches checked for corrosion	

ELECTRICS

☐ Leisure battery tested under load	
☐ Hook-up lead and RCD tested	
☐ 12V lighting, pump and fridge on all three power modes	
☐ Solar panel and charge controller output checked	

- Notes and anything specific to yours

Boat Maintenance and Engine Hours Log

Service a marine engine by hours, and keep the impeller and anode record that matters more than almost anything else on a boat.

Engine hours, servicing and seasonal work for a boat. Hours matter more than dates on a marine engine, and impellers matter more than almost anything.

Vessel name	Make & model	Year
Hull ID / registration	Engine make & model	

SPECIFICATIONS

Engine oil & qty	Gearbox / leg oil	Oil filter
Impeller part no.	Fuel filter	Anodes
		Plugs

ENGINE HOURS AND SERVICE LOG

Date	Hours	Engine oil	Gear oil	Impeller	Anodes	Fuel filter	Work / notes

- ☐ Engine winterised — antifreeze through raw water side
- ☐ Fuel treated and tanks left full to limit condensation
- ☐ Batteries removed or on a maintainer
- ☐ Seacocks closed, checked and greased
- ☐ Hull cleaned, antifouled; anodes replaced
- ☐ Bilge dry, bilge pump and float switch tested
- ☐ Safety gear in date — flares, extinguishers, lifejackets

Notes and anything specific to yours

Trailer Pre-Tow Inspection Checklist

Run the same walk-around every time, in the same order, so nothing gets skipped because you were in a hurry.

A pre-tow inspection for a trailer, horsebox, plant trailer or caravan. Runs top to bottom in the order you would walk around it.

KNOW YOUR OWN LIMITS

Load security and towing limits are legal duties in most countries, and the limits depend on your vehicle, your licence and the trailer's plated weights. Check what applies to you — this sheet records the walk-around, it does not set the rules.

Trailer / unit	Registration or ID	Date
Towing vehicle	Checked by	

COUPLING

☐ Coupling head fully seated and locked on the ball	
☐ Safety chain or breakaway cable connected correctly	
☐ Jockey wheel raised, clamped and secure	
☐ Handbrake released; damper and linkage sound	

RUNNING GEAR

☐ Tyre pressures correct, including the spare	
☐ Tyre tread, sidewalls and age	
☐ Wheel nuts tight to torque	
☐ Hubs not running hot after a short run	
☐ Suspension and axle visually sound

This page is intentionally blank.

Small Engine Service Log

Give every small machine in the shed the same maintenance record, using one sheet per machine.

A general service log for any small four-stroke engine — tiller, chipper, log splitter, water pump, cement mixer, strimmer or anything else with a pull cord.

Machine make & model

This page is intentionally blank.

Lawn Mower Service Log

Keep a mower running past its fifth year, by tracking the three things that actually kill them: stale fuel, a blocked air filter and neglected oil.

A service record for a walk-behind or ride-on mower. Most mowers that die young die of old fuel, a blocked air filter and a blunt blade — all three are on this sheet.

SERVICE RECORD

Date	Hours / season	Oil	Air filter	Plug	Blade	Other work	By

Date	Hours / season	Oil	Air filter	Plug	Blade	Other work	By

- ☐ Fuel drained or stabiliser added — stale fuel is the commonest failure
- ☐ Oil changed before storage, not after
- ☐ Deck cleaned of packed grass underneath
- ☐ Blade sharpened and balanced, or replaced
- ☐ Battery removed and kept charged
- ☐ Stored dry, off a cold concrete floor

Notes and anything specific to yours

Ride-On Mower Service Log

Service a ride-on by hours rather than by guesswork, and stop a deck belt or a spindle bearing being the thing that ends the season early.

Hour-based service record for a ride-on or lawn tractor — the engine, the deck and the belts as three separate things that wear at three different rates.

Mower make & model _____ Serial number _____ Purchased _____ Warranty ends _____

HEAD AND BLADE CHANGES what went on, and the guard that went with it

Date	Fitted	Reason	Guard fitted	Blade sharpened / new	By

BEFORE EACH USE

- ☐ Guard matches the head or blade fitted
- ☐ Blade nut tight, blade not cracked or bent
- ☐ Harness quick-release works
- ☐ Head stops when throttle is released
- ☐ Throttle lock and stop switch work
- ☐ Line not welded into the spool

Notes — line that keeps breaking, vibration, anything specific to yours

Hedge Trimmer Service and Blade Record

Stop a trimmer being run with blunt, loose blades and a dry gearbox, by giving the blades their own record instead of burying them in general notes.

A hedge trimmer lives or dies by its blades and its gearbox. This sheet keeps the blade spec and the grease type where you can find them, and logs every sharpen, adjustment and service.

Trimmer make & model

Serial number

Date	Hours	Turned	Sharpened	Replaced	Anvil checked	Clearance set	Bolts checked	Notes

ENGINE AND FEED SYSTEM SERVICE by hours, from the meter

Date	Hours	Engine oil	Air filter	Belts	Feed rollers	Greased	Other work	By

BEFORE EACH USE

- ☐ Feed stop bar or emergency stop works
- ☐ Discharge chute secured and pointing clear
- ☐ Feed roller reverses when asked
- ☐ Belts not frayed, guards fitted over them
- ☐ Blade housing closed and locked, no tools left inside
- ☐ Hydraulic hoses not weeping, hitch and lights sound

Notes — chip quality, blocking, anything specific to yours

Stump Grinder and Tooth Record

See at a glance how many teeth went on and when, and catch loose pockets and bolts before a tooth leaves the wheel at speed.

A stump grinder is a set of teeth with an engine behind them. This sheet tracks the teeth, pockets and bolts as their own record, with the engine and machine service underneath.

Date	Hours / uses	Pump oil	Engine oil	Inlet filter	Nozzles / hose	Other work

- ☐ Water fully drained from pump, hose and gun
- ☐ Pump antifreeze or protector run through
- ☐ Detergent tank flushed clean
- ☐ Fuel drained or stabilised
- ☐ Stored where it cannot freeze — a frozen pump is a dead pump

Generator Service and Run Log

Make sure a standby generator actually starts when the power goes out, by recording the monthly exercise runs that keep it alive.

Run hours, exercise runs and servicing for a standby or portable generator. A generator that has not been run since it was bought is the least reliable machine you own.

EXERCISE IT MONTHLY

Run it under load for half an hour every month. Generators fail from standing, not from working — carburettors gum, fuel goes stale, and batteries die quietly.

Generator make & model

| ☐ Grease points | ☐ Radiator screen clear |
| ☐ Lights and beacon | ☐ Fuel level and water trap |

Notes and anything specific to yours

Outdoor Machinery Winterising Checklist

Do one pass through everything with an engine before the cold, so nothing needs a carburettor rebuild in spring.

One pass through every petrol machine you own before the cold, so that none of them needs a carburettor rebuild in spring.

FUEL IS THE WHOLE PROBLEM

Stale fuel is the single most common reason a machine will not start in spring. Either run it dry or treat the fuel — half-measures are worse than either.

Machine	Fuel drained / stabilised	Oil changed	Cleaned	Battery out	Blade / chain	Stored where	Done

Machinery Winter Storage Record

Know in spring where every battery, drain plug and machine actually is, and whether it started, instead of finding out the hard way on the first fine day.

Where every machine went for the winter, what state it went in, and what state it came back out — one line per machine, in and out. The winterising checklist is the doing; this is the record.

Store / building

Trailer Annual Service Record

Keep an annual service history for a trailer, so its condition is a record of dates and work rather than a vague sense that it was fine last year.

The once-a-year service record for a trailer — bearings, brakes, coupling, tyres, lights and chassis — kept as a dated history rather than a walk-around before one journey.

INSPECTION RULES DIFFER BY COUNTRY AND BY USE

Whether a trailer has to be inspected or tested, how often, and by whom depends on its weight, what it is used for and the country it is used in, and trailers used for business are usually treated differently from private ones. Check what applies to yours — this sheet records the service, it does not set the interval.

Trailer make & model	ID / registration	Year
Chassis / VIN	Plated MAM	Unladen weight
		Axles

SERVICE HISTORY one line each year — the chain of dates is the record

Date	Miles or years	Work carried out	Parts fitted	By	Cost

BEARINGS AND HUBS

- ☐ Wheels jacked clear and checked for play at the top and bottom of the tyre
- ☐ Bearings stripped, inspected and repacked, or replaced
- ☐ Grease clean — milky grease means water, gritty grease means it is too late
- ☐ Seals, dust caps and split pins renewed where they were disturbed

COUPLING, DAMPER AND BRAKES

- ☐ Coupling head wear checked on the ball, and the locking mechanism working
- ☐ Overrun damper tested — it should push in slowly and return on its own
- ☐ Brake shoes, drums and auto-reverse mechanism inspected
- ☐ Brake rods, cables and compensator freed off, adjusted and greased
- ☐ Handbrake holds on a slope; breakaway cable or safety chain sound

WHEELS AND TYRES

- ☐ Tread, sidewalls and date code on every tyre including the spare
- ☐ Pressures set to your own figures for the load, not to a car's figures
- ☐ Wheel nuts tightened to your own torque figure, and re-checked after a run
- ☐ Rims checked for corrosion, cracks and buckling

LIGHTS AND ELECTRICS

- ☐ All lamps, indicators, fog and reversing lights, with a second person watching
- ☐ Plug, socket and cable clean, dry and clipped clear of the road
- ☐ Earth connection clean — most trailer light faults are an earth fault
- ☐ Number plate present, legible and matching the towing vehicle

CHASSIS, FLOOR AND BODY

- ☐ Chassis, drawbar and welds checked for cracks and corrosion
- ☐ Floor sound from above and from underneath
- ☐ Sides, ramps, doors and their hinges and catches

☐ Jockey wheel, prop stands, tie points and lashing rings

Notes and anything specific to yours

Trailer Bearing and Brake Service Log

Keep the wheels-off detail a one-line annual record cannot hold.

One wheels-off service, hub by hub and wheel by wheel — the detail the annual service record squeezes into a single line.

YOUR AXLE MAKER'S FIGURES GO IN THE BLANKS

Bearing part numbers, grease type, hub nut torque and end float, brake shoe and cable specification all come from the axle maker or the trailer's handbook. Look them up once, write them in the maker's-figures rows below, and never guess them.

Trailer	Axle make & type	Axles	Braked?	Service date	Done by
Maker's bearing nos. — inner / outer		Seal part no.	Grease type	Hub nut torque / end float	
Maker's brake shoe / pad no.		Brake cable / rod spec	Coupling damper part no.	Wheel nut torque	

HUB AND BEARING WORK one line per hub — N/S near side, O/S off side

Hub	Miles / use	Grease found	Bearing state	Seal	Fitted	Nut set to	Immersed?
N/S 1	since last	clean / grey / water	smooth, rough, pitted	OK / weeping	bearings, seal, hub, grease		salt / fresh / no

BRAKE WORK per wheel, plus the coupling end

Wheel	Lining left	Drum / disc	Cable / rod	Adjusted	Auto-reverse	Handbrake	Breakaway	Tyre & pressure
	mm or fraction	scored, rusty, OK	free / seized	how	works?	holds?	cable OK?	set to yours

Utility Trailer Inspection Checklist

Catch deck rot, a seized ramp hinge or a chafed cable before it fails on the road, with a walk-round that goes further than a same-day pre-tow glance.

A walk-round for an open utility or general-purpose trailer — the deck, the sides, the ramp or tailgate, the lights and the running gear — between the quick pre-tow glance and the annual service.

A RECORD OF WHAT YOU CHECKED, NOT A CERTIFICATE

This records what was looked at and what was found. It is not a roadworthiness certificate and names no standard. What your trailer must be checked for, and how often, is set by your own regulator, your insurer and the trailer's manufacturer, and that differs by country — check what applies to yours.

Trailer make & model	ID / registration	Date
Typical load	Unladen weight	Checked by

DECK AND FLOOR

☐ Deck boards or floor sound, with no rot, rust-through or soft spots	
☐ Floor clear of debris that could hide damage or shift a load	
☐ Load-securing points — rings, rails or hooks — intact and firmly fixed	
☐ Mesh or drop sides close and latch properly	

RAMP AND TAILGATE

☐ Ramp or tailgate hinges free and not seized	
☐ Ramp springs or gas struts holding it under control, not dropping	
☐ Locking pins and catches engage fully on both sides	
☐ Ramp surface not slippery — grip strips or tread intact	

COUPLING AND RUNNING GEAR

☐ Coupling head clean, greased and closing fully onto the ball	
☐ Safety chain or breakaway cable fitted and not stretched	

- ☐ Jockey wheel winds freely and locks up clear of the ground
- ☐ Handbrake, where fitted, holds and releases fully

LIGHTS AND ELECTRICS

- ☐ Plug and socket clean and making a full connection
- ☐ Indicators, brake lights, tail lights and number plate light all work
- ☐ Cable run clear of the coupling and not chafing anywhere

TYRES AND WHEELS

- ☐ Tyre pressures checked cold, both sides
- ☐ Tread and sidewalls checked for cuts, bulges and cracking with age
- ☐ Wheel nuts checked for tightness, re-torqued after new wheels bed in

Notes and anything specific to yours

Boat Trailer Inspection Checklist

Inspect the things that only go wrong on a trailer that gets driven into the water — wet bearings, corrosion from the inside, and a winch strap nobody has unrolled in years.

An inspection for a trailer that gets driven into the water. Immersion, and salt water above all, does things to a trailer that no road trailer ever has to survive.

HEAT, WATER AND SALT

A hot hub dunked in cold water draws water in past the seal as it cools, and salt left inside a box section works from the inside out where nobody looks. Let the hubs cool before launching, and rinse the whole frame with fresh water afterwards — including the inside, through the drain holes.

Trailer make & model	ID / registration	Date
Boat & weight	Usual water	Checked by

BEARINGS, HUBS AND IMMERSION

☐ Bearing protectors seated, turning and holding grease	
☐ Hubs cool to the hand before the trailer goes in the water	
☐ Grease inspected — milky means water has got past a seal	
☐ Play checked at the top and bottom of each wheel	
☐ Seals, dust caps and hub nut retention sound	

CORROSION

☐ Whole frame rinsed with fresh water after every salt launch	
☐ Drain holes clear so box sections empty instead of holding brine	
☐ Galvanising or paint intact; no bubbling or flaking at the welds	
☐ Spring hangers, U-bolts, shackles and axle checked for section loss	
☐ Brakes, where fitted, flushed and freed off after immersion	

ROLLERS, BUNKS AND SUPPORTS

- ☐ Rollers turn freely and have no flat spots
- ☐ Bunk carpet sound, with no exposed staples or bolt heads
- ☐ Keel rollers aligned and carrying weight where the hull is strong
- ☐ Boat sitting square, hard against the bow stop

WINCH AND SECURING

- ☐ Winch strap or wire run out full length and inspected end to end
- ☐ Winch hook, safety catch, ratchet and brake pawl all working
- ☐ Separate bow safety chain fitted as well as the winch strap
- ☐ Transom or stern straps tight, and re-checked after a few miles
- ☐ Outboard supported, and mast, fuel and loose gear secured

LIGHTING BOARD AND ELECTRICS

- ☐ Lighting board removed or unplugged before the trailer enters the water
- ☐ Board mounted high, clear of the water, and secure
- ☐ All lamps, plug, socket and cable checked with someone watching

Signed

Notes and anything specific to yours

Horsebox and Livestock Trailer Check

Check the floor properly before every trip, and run the same pre-travel routine each time so the animal side is not left to memory.

A pre-travel check for a horsebox or livestock trailer, starting with the floor — which is what actually fails on these — and ending with the walk-around before you pull away.

ANIMAL TRANSPORT RULES ARE LOCAL

Rules on transporting animals differ by country, and often by whether the journey is connected with a business: journey times, vehicle and trailer standards, and any authorisation or certificate of competence are all set locally. Check what applies to your journey before you load.

Trailer / horsebox	Registration or ID	Date
Towing vehicle	Journey	Checked by

FLOOR — CHECK THIS ONE PROPERLY

☐ Mats lifted and the whole floor seen dry, in daylight	
☐ Floor probed for soft spots, especially at the back and along the sides	
☐ Underside inspected from below for rot, corrosion and failed sealant	
☐ Cross-members, bearers and floor fixings sound	
☐ Rubber matting flat, with no lifting edges or exposed fixings	

RAMP AND DOORS

☐ Ramp boards, hinges, springs and any lifting aid	
☐ Ramp catches and jump flaps engage positively on both sides	
☐ Groom's door opens from inside as well as out	
☐ Rear doors, breeching gates and their hinges and pins	

PARTITIONS AND THE INSIDE

- ☐ Partitions, breast bars and breeching bars secure and quick to release
- ☐ Tie rings and their fixings sound — a tie ring should hold, or break safely
- ☐ No sharp edges, protruding bolts, splinters or torn lining anywhere
- ☐ Interior lights work and are protected
- ☐ Bedding down as you intend to travel, and the surface not slippery

VENTILATION, WATER AND THE JOURNEY

- ☐ Vents and roof lights open, and set for the weather on the day
- ☐ Airflow not blowing directly onto a travelling animal
- ☐ Water containers filled, secured and reachable at a stop
- ☐ Hay nets tied high enough that they cannot be trodden on when empty
- ☐ Journey time, rest stops and a breakdown plan agreed before loading

BEFORE YOU PULL AWAY

- ☐ Coupling seated and locked; breakaway cable or safety chain connected
- ☐ Jockey wheel raised and clamped; handbrake released
- ☐ Tyre pressures, condition and age, including the spare
- ☐ Wheel nuts tight; hubs not running hot after a short run
- ☐ All lights and indicators checked with someone watching

Towing Weights and Limits Record

Get your own towing figures out of four different documents and onto one sheet, with a line for every time the outfit is actually weighed.

A fill-in-once record of the weights and limits that apply to your own vehicle, trailer and licence, so the numbers are written down instead of half-remembered on a weighbridge.

EVERY FIGURE HERE IS YOURS, NOT OURS

Nothing on this sheet sets a limit. Towing limits come from your vehicle manufacturer and the plates on the vehicle and trailer; what you are entitled to tow comes from your licence, and licence categories differ by country and by when you passed your test. Copy every figure from your own registration document, the plates themselves, and the licensing authority where you live — and check it again if any of those change.

TOWING VEHICLE

Make & model		Registration		Year
Kerbweight / mass in service		Gross vehicle weight		Source of figures
Max braked trailer	Max unbraked	Max train weight	Max noseweight	

TRAILER

Make & model		Chassis / ID no.		Year
Plated MAM	Unladen weight	Axles	Braked?	Coupling rating
Max axle load	Tyre size & load index		Noseweight limit	

LICENCE AND ENTITLEMENT check this against your own authority, and date it

Driver	Licence categories held	Date test passed
Entitlement confirmed on	Checked against — authority or document	

Caravan Habitation Check Record

Record damp readings at the same points year after year, so a wet corner shows up as a trend long before it shows up as a repair bill.

A record of a habitation check on a caravan or motorhome — damp readings taken at the same points every time, then gas, water, ventilation, electrics, appliances and the seals that keep it dry.

GAS AND WARRANTY CHECKS ARE SOMEBODY'S JOB, NOT THIS SHEET'S

Gas work is regulated in most countries and usually has to be done by a qualified person, and many warranties depend on an annual habitation check by an approved workshop. Check what applies where you are. This sheet records what was found; it is not a substitute for a check that has to be carried out by somebody qualified.

Caravan / motorhome

Registration / CRIS / VIN

Year

Date of check

Checked by

Next check due

DAMP READINGS same points every year — the trend matters more than one number

Location	Reading	Date	Reading	Date	Reading	Date	Trend and action
corners, lockers, under windows	check 1		check 2		check 3		

GAS

- ☐ Bottles secure, in date where they are dated, and turned off in transit
- ☐ Regulator, hoses and clips inspected and within their own replacement date
- ☐ Locker vents and drop-out holes clear and unobstructed
- ☐ Appliances lit and burning cleanly, with no lifting or yellow flame
- ☐ Carbon monoxide alarm present, in date and tested

WATER AND DRAINAGE

- ☐ Fresh tank drained, sanitised and refilled; pump and filter working
- ☐ Waste tank, drain valves and traps flushed and free
- ☐ No weeping at pipe joints, pump, taps or the water heater
- ☐ Shower tray, sink and toilet seals sound

VENTILATION

- ☐ Fixed low and high level vents clear — never blocked, whatever the weather
- ☐ Roof lights and their seals open, close and lock
- ☐ Extractor fans and hob vent working

ELECTRICS

- ☐ Hook-up lead, plug and RCD inspected and the RCD test button used
- ☐ Consumer unit, sockets and 12V circuits working with nothing warm
- ☐ Leisure battery tested under load and its terminals clean
- ☐ Solar panel and charge controller output seen and recorded

APPLIANCES

- ☐ Fridge on all the power modes it offers, and its vents clear
- ☐ Space heating and water heating run up to temperature

Outboard Motor Service Log

Service an outboard by hours rather than by dates, and keep the impeller and anode record that decides whether the motor has a long life or a short one.

Hours, servicing and salt-water flushing for an outboard motor. The impeller and the anodes are the two cheap parts whose neglect turns into an expensive one.

Motor make & model

Serial number

Year

Boat

Shaft length

Two or four stroke

Fuel

SPECIFICATIONS from your own manual — look them up once

Engine oil grade & qty

Gear oil grade & qty

Oil filter part no.

Water pump / impeller kit

Spark plugs & gap

Fuel filter part no.

Anode part numbers

Propeller & pitch

Prop nut torque

SERVICE LOG

Date	Hours	Eng oil	Gear oil	Impeller	Plugs	Anodes	Fuel filt	Work and notes

- ☐ Flushed with fresh water long enough for the block to run cool
- ☐ Cowling off, engine wiped down and inhibitor sprayed
- ☐ Anodes looked at — they are meant to waste, but not to vanish
- ☐ Fuel connector, clamps and controls rinsed and dried
- ☐ Propeller checked for line, weed and a bent blade
- ☐ Motor tilted down to drain, then stored as the manual says

Boat Engine Hours and Service Record

Turn the hour meter into a service schedule you can actually read.

The engine hour meter read at the end of every run, and the servicing that falls due against those hours — so the next oil change is a number on the page, not a feeling about last summer.

YOUR MANUFACTURER'S SCHEDULE, IN YOUR HAND

The hours at which each job falls due come from your engine manufacturer's schedule, and they differ between engines, fuels and how hard the boat is used. Copy your own schedule into the first block and use it every time. An outboard belongs on the Outboard Motor Service Log; this sheet is for an inboard or sterndrive with an hour meter.

Vessel

Engine make & model

Hours at start of sheet

Meter reads in

Oil grade & quantity

SERVICE SCHEDULE your manufacturer's interval, and the hours it is next due

Job	Every (hrs)	Or every	Last done at	Next due at	Part / filter no.
oil & filter, fuel filters, impeller, belts...	from your schedule	months / season	hrs	hrs	

Notes — parts bought, faults found, who did the work

Marine Battery and Electrical Log

Track battery voltages as a series rather than a single reading, so a bank that is dying is obvious well before it strands you.

A record of the battery bank, its charge readings, the anodes and the electrical system on a boat, where almost every flat battery turns out to be a corroded terminal.

Vessel	Make & model	Year
Charger / controller	Shore power fitted?	Solar fitted?

BATTERY BANK fill in once, then update when a battery is changed

No.	Bank	Chemistry	Capacity	Fitted	Replace by	Where
	start / domestic	flooded, AGM, gel, lithium	Ah			

ANODES shaft, rudder, trim tabs, engine, hull

Date	Location	Wear	Replaced	Notes

SHORE POWER, SOLAR AND WIRING

- ☐ Shore lead, plug and socket — no heat damage, no corrosion, no cracked insulation
- ☐ RCD or breaker tested with its own test button, not just looked at
- ☐ Galvanic isolator or isolating transformer checked where one is fitted
- ☐ Battery isolator switches operating, labelled and reachable in a hurry
- ☐ Terminals clean, tight and protected — this is where the fault usually is
- ☐ Fuses and breakers correctly rated for their cable, and labelled
- ☐ Cable runs supported, and nothing chafing where it passes through a bulkhead
- ☐ Nothing live sitting in the bilge, and bilge pump wiring above bilge water
- ☐ Charge controller settings matched to the battery chemistry actually fitted
- ☐ Solar output measured in sun and written in the log below

CHARGE AND CONDITION READINGS

Date	Bank	Resting V	Under load	Charging V	Charged by	Notes

Boat Safety Equipment Check

Keep an inventory of the safety gear aboard with the date each item expires, so the out-of-date ones are found at the dock rather than at sea.

An inventory and expiry record for the safety gear on a boat — lifejackets, flares, extinguishers, pumps, radio and beacons — so you find out what is out of date at the dock, not at sea.

CARRIAGE REQUIREMENTS DIFFER BY COUNTRY AND BY WATER

What you must carry, how it has to be serviced, and how out-of-date pyrotechnics may be disposed of are set by the country you are in, the water you use and the size and type of your boat, and they change. This is not a carriage list: it is a place to write down what you actually carry and when each item runs out. Check the requirements that apply to you before you go.

Vessel

Type & length

FLARES AND SIGNALS

Type	Quantity	Expiry	Stowed where	Replaced	Disposal arranged

FIRE EXTINGUISHERS AND BLANKETS

No.	Type	Location	Made	Serviced	Replace by	OK

EVERYTHING ELSE ABOARD tick, and write the date on anything that expires

- ☐ Bilge pump — electric, run and seen to move water
- ☐ Bilge pump — manual, and its handle where you can reach it
- ☐ Float switch tested by lifting it, not by the panel switch
- ☐ VHF radio tested, and DSC registration current
- ☐ EPIRB or PLB — registration and battery date
- ☐ Liferaft service date, and its painter made fast
- ☐ Lifebuoy, danbuoy and throw line
- ☐ First aid kit — contents checked, not just the box
- ☐ Engine kill cord and a spare
- ☐ Torch, spare batteries and a waterproof light
- ☐ Anchor, chain and warp, ready to run
- ☐ Navigation lights and a radar reflector

Liferaft and Safety Gear Service Record

Keep the certificates and service dates for everything sent away for testing.

The items on a boat that are sent away, tested or recertified — liferaft, hydrostatic release, lifejacket cylinders, beacons, extinguishers — each with its own service history, in one place for when the surveyor or the insurer asks.

SERVICE INTERVALS ARE THE MAKER'S AND THE STATION'S, NOT OURS

How often each item has to be serviced, who may do it and whether it must be done at all depends on the maker, the type of boat and the rules where you sail — the interval is a blank here, for the figure from your service station or manufacturer. The Boat Safety Equipment Check is the inventory of what is aboard; this is the servicing file for the items that leave the boat.

Vessel _____ Service station used _____ Phone / email _____

LIFERAFT from the plate on the canister or valise

Antifoul and Hull Treatment Log

Know exactly what is on the hull before you buy the next tin.

What went on the hull, when, and how it was prepared — every antifoul coat, primer, epoxy and polish, with the tin details written down so the same product can be found again next year.

THE TIN, THE YARD AND THE LOCAL RULES DECIDE

Which products you may use, how many coats they need and how the old paint and washings must be caught and disposed of are set by the maker's data sheet, the yard and the rules where you are — none of that is printed here. This sheet stops you standing in the chandlery trying to remember what you used last time.

Vessel

Hull material

Usual water

Current antifoul — product & type

Colour

Compatible over

HULL TREATMENT HISTORY one line per coat or job, oldest at the top

Date	Job	Product & colour	Batch no.	Coats	Prep done	Litres used	By

FOULING AND CONDITION AT HAUL-OUT weed, slime, barnacles: none, light or heavy — what came off tells you if it worked

Date hauled	Months in	Weed	Slime	Barnacles	Worst area	Paint left	Osmosis / blisters
					waterline, keel, rudder...	worn through?	seen where

Winter Lay-Up and Launch Checklist

Put the autumn lay-up jobs and the spring launch checks on the same page, so what you did in October is in front of you in April.

The same jobs in both directions — what to do when the boat comes out in autumn, and what to check before it goes back in the water in spring. One sheet per season, signed at both ends.

YARD AND LOCAL RULES ON ANTIFOULING

Where you may work on a boat ashore, what antifouling you may apply, and how the washings and old paint have to be collected and disposed of are set locally and by the yard. Ask before you start scraping.

Vessel		Season / year		Stored where	
Laid up on	By	Launched on	By		

LAYING UP — AUTUMN

- ☐ Engine flushed, oil and filter changed while warm
- ☐ Coolant and raw water side protected against frost
- ☐ Fuel tanks left full and treated against condensation
- ☐ Gear oil drained and checked for water
- ☐ Batteries off, charged, and on a maintainer
- ☐ Seacocks closed, freed off and greased
- ☐ Bilge dry, and the bilge pump left able to work
- ☐ Water system drained down completely
- ☐ Hull washed off before the growth dries hard
- ☐ Sails, ropes and canvas dried before they are bagged
- ☐ Electronics, flares and papers taken home
- ☐ Cover fitted so it sheds water and cannot flog

BEFORE LAUNCH — SPRING

- ☐ Anodes replaced, and the old wear noted
- ☐ Antifouling applied and the yard's rules followed
- ☐ Skin fittings, hoses and clips checked from inside
- ☐ Seacocks opened, then watched for weeping
- ☐ Impeller replaced or inspected before first start
- ☐ Belts, hoses, oil and coolant levels checked
- ☐ Batteries refitted, terminals cleaned and greased
- ☐ Water system refilled, sanitised and run through
- ☐ Steering, throttle and gear controls full travel
- ☐ Safety gear back aboard and in date
- ☐ Bilge pump and float switch tested with water
- ☐ Engine run and cooling water seen before leaving the berth

Laid up — signed	Launched — signed	Date

Boat Berth and Mooring Record

Keep the berth paperwork and the mooring gear history on one sheet.

Where the boat is kept, what the berth costs and when it renews, and a dated record of the lines, chain, swivel and fenders that are holding it there.

YOUR HARBOUR'S TERMS, NOT OURS

Berth fees, what the harbour requires of a mooring and how often the ground tackle has to be lifted and inspected come from the marina, the harbour authority or the mooring contractor — write their figures in the blanks. The sheet holds what you agreed and what you checked, not what it ought to be.

Vessel _____ Length overall _____ Beam _____ Draught _____ Insurance renews _____

BERTH OR MOORING from the agreement — copy it once, update when it changes

Marina / harbour / mooring owner _____ Berth or mooring no. _____ Type _____ Winter storage — where _____

Contact & phone _____ Agreement runs from _____ To _____ Notice to give _____

Fee & what it covers _____ Paid how often _____ Last paid — date & invoice no. _____ Next payment due _____

Access code / key no. _____ Harbour rules on the mooring — anodes, chain size, lifting, who may work on it _____

MOORING GEAR CHECKS lines, chain, shackles, swivel, buoy, fenders, cleats

Date	What was checked	Chafe / wear	Replaced	Inspected by	Next check
	lines, chain, riser, swivel...	where	what, with what	diver, contractor, you	your interval

Crew List and Passage Plan Sheet

Leave a shore contact with everything they need if the boat is overdue.

Who is aboard, where the boat is going and when to worry — filled in before you leave and handed to someone staying ashore.

LEAVE A COPY ASHORE

What you must file, with whom and for which waters is set where you are and where you are going; this is the working plan and crew list, not an approved form. The underway record — position, course, weather as it happens — is the Sailing Passage Log and stays on the boat. This sheet stays on land.

This page is intentionally blank.

Vehicle Viewing Comparison Sheet

Compare the cars you have seen on what you wrote at the kerb rather than on what you can still remember a week later.

Three vehicles side by side on one page — asking price, mileage, year, test left, faults seen and what each one drove like — so the choice is made on notes rather than on the last one you saw.

WRITE IT AT THE KERB

Fill a column in while you are still standing at the vehicle, not that evening. The middle car always sounds better than it was by the time you get home, and the first one is usually the one you forget.

Your nameDates viewedBudget you have setPreferred in the end

THE THREE AT A GLANCE one row per vehicle

Vehicle	Seller and where	Price asked	Odometer	Year	Test left	Advertised as
make, model, trim					expiry date	

WHAT EACH ONE WAS ACTUALLY LIKE

Vehicle	Faults seen	How it drove	Paperwork seen

This page is intentionally blank.

Used Car Pre-Purchase Inspection Sheet

Carry out the same inspection on every car you view, so a decision made in somebody's driveway is based on what you saw rather than what you remember.

One sheet per car, filled in on the driveway while you are standing in front of it. Print one per viewing and lay them side by side afterwards, when nobody is watching you decide.

WHAT THIS SHEET IS, AND IS NOT

This is a buyer's own walk-round, not a professional inspection. It exists because people forget checks when a stranger is standing beside them — anything expensive is still worth paying an independent inspector to look at before money changes hands.

Make and model	Registration	Year	Date viewed
VIN / chassis number	Engine and gearbox	Colour	Advert reference

PRICE, MILEAGE AND HISTORY the numbers to settle before you look at the car

Asking price	Mileage on the clock	Mileage at the last stamp	Former keepers
Seller — name and town	Private or trade	Phone	Do the mileages agree?

DOCUMENTS SEEN tick only what you have actually held in your hand

☐ Registration document — seller's name and address	☐ Roadworthiness certificate, and when it expires
☐ Service book stamps, dates and mileages in order	☐ Both keys, locking nut key and handbook
☐ Invoices for the work the advert claims	☐ Finance, write-off and identity checks done

COLD START ask for the engine to be stone cold when you arrive

☐ Bonnet cold to the hand before the key is turned	
☐ Smoke on start-up — colour, and whether it clears	
☐ Noises from cold: rattle, tap, whine, chain	
☐ Idle steady, or hunting and dropping	
Warning lights with the ignition on, before starting	Still lit once it has started

PANELS, GAPS AND PAINT walk round in one direction and write what you see

☐ Bonnet — gaps and paint	_____	☐ Roof, pillars and screen	_____
☐ Wings and headlamps	_____	☐ Rear quarters and arches	_____
☐ Doors, gaps and sills	_____	☐ Boot floor and bumpers	_____

TYRES AND WHEELS front and rear, plus the spare — the date code is on the sidewall

Wheel	Make and model	Size	Tread depth	Date code	Condition and damage

Engine oil — colour and level Coolant Brake fluid Gearbox and other

Test drive — clutch, gears, brakes, steering, temperature, noises

FAULTS FOUND, AND WHAT THEY COST TO PUT RIGHT

Fault	How bad	Who quoted	Cost to fix	Off the price?

Decision Offer made Outcome

Test Drive Checklist

Come back from a test drive with notes on what you heard and where, instead of a general feeling that it seemed fine.

Things to try and things to listen for on a test drive — cold start, steering, brakes, gears, noises and electrics — written as observations you record, not as marks a vehicle passes.

OBSERVATIONS, NOT MARKS

Nothing here is a pass or fail. Write what you noticed and where you noticed it; a noise at low speed on full lock and a noise under braking are different problems, and only you were there. Anything that worries you is a question for a mechanic, not for this sheet.

Vehicle

Date of drive

Route and conditions

BEFORE YOU MOVE

- ☐ Note whether the engine is already warm when you arrive
- ☐ Watch the warning lights come on and go out at ignition
- ☐ Start it from cold if you can, and listen to the first few seconds
- ☐ Look behind the vehicle at start-up for smoke or steam
- ☐ Check the mirrors, seat and steering column all adjust
- ☐ Check the seat belts pull out and retract cleanly

STEERING AND SUSPENSION

- ☐ Note any play or vibration through the wheel at low speed
- ☐ Listen on full lock in both directions
- ☐ Note whether it pulls to one side on a flat, straight stretch
- ☐ Listen over a rough surface and over a speed bump
- ☐ Note how it settles after a dip rather than bouncing on
- ☐ Note whether the wheel self-centres coming out of a bend

BRAKES

- ☐ Try a gentle stop, then a firmer one where it is safe
- ☐ Note any pulling, judder through the pedal or grinding
- ☐ Note how far the pedal travels and whether it feels consistent
- ☐ Try the parking brake on a slope

GEARBOX AND DRIVE

- ☐ Take it through every gear, up and down
- ☐ Note any crunch, whine or hesitation changing gear
- ☐ On an automatic, note how it shifts under light and heavy throttle
- ☐ Note any vibration that changes with road speed
- ☐ Note any clutch slip when accelerating in a high gear

NOISES AND SMELLS

- ☐ Drive part of the route with the radio and fan off
- ☐ Note where each noise comes from and what you were doing
- ☐ Note any smell of burning, fuel, coolant or damp
- ☐ Open a window and listen alongside a wall or hedge

ELECTRICS AND CABIN

- ☐ Try every window, mirror, lock and light
- ☐ Try the heater and the air conditioning on both settings
- ☐ Try the wipers, washers, horn and screen heaters
- ☐ Check the infotainment, reversing camera and sensors work
- ☐ Check the warning lights again once the drive is finished

Vehicle History and Paperwork Check Record

Keep a dated account of which documents you actually saw and what each one said, rather than a memory of being shown a folder.

A record of which documents you were actually shown and what each one said — registration, service book, invoices, keys and the checks you ran yourself.

WHAT YOU SAW, NOT A GUARANTEE

This sheet records what you saw, nothing more. It makes no claim that a vehicle is clear of finance, accurately described or legally transferable — which checks exist and what they prove differs from place to place, so check the rules where you are and use the official sources for your country.

Vehicle

Registration / plate

VIN / chassis

Seller name

DOCUMENTS SEEN one row per document put in front of you

Document	Seen?	Original or copy	Name and address on it	What it said
registration, test certificate, invoices...				

SERVICE HISTORY

Date on record	Odometer shown	Who did the work	What was done	Stamp or invoice

CHECKS YOU RAN record the reference, not a conclusion

Check	Where it was run	Date	Reference number	What it returned

Motorcycle Pre-Purchase Inspection Sheet

Walk round a used bike in an order that catches crash damage, chain and sprocket wear and weeping fork seals before the money moves.

A bike-specific walk-round before you buy — frame and numbers, chain and sprockets, forks, tyres, chassis, electrics and paperwork — with room for what each fault might cost.

THE HANDBOOK SETS THE FIGURES

No wear limits, tread depths, chain slack figures or service intervals are printed here, because they are set per model by the manufacturer's own handbook and workshop manual. Write down what you find, then check it against the figures for that bike.

Make and model	Registration / plate	Year
Frame / VIN number	Engine number	Odometer
		Asking price

FRAME, NUMBERS AND CRASH DAMAGE

- | | |
|--|---|
| ☐ Frame and engine numbers legible | ☐ Welds checked for fresh paint |
| ☐ Numbers matched against the paperwork | ☐ Headstock checked for play, wheel raised |
| ☐ Frame checked for cracks or ripples | ☐ Bar ends, levers and footpegs checked |

CHAIN, SPROCKETS AND FINAL DRIVE

- | | |
|--|--|
| ☐ Chain checked along its whole length | ☐ Sprocket teeth checked for hooking |
| ☐ Tight and loose spots noted | ☐ Adjusters checked for even marks |
| ☐ Chain checked for rust and kinked links | ☐ Shaft or belt drive checked for leaks |

SUSPENSION AND STEERING

- | | |
|--|---|
| ☐ Stanchions checked for pitting and rust | ☐ Rear shock checked for sag under you |
| ☐ Fork seals checked for weeping oil | ☐ Steering turned lock to lock |
| ☐ Rear shock checked for leaks | ☐ Swingarm and linkages checked for play |

WHEELS, TYRES AND BRAKES

- | | |
|---|--|
| ☐ Tread depth noted on both tyres | ☐ Wheels checked for buckles and dents |
| ☐ Wear pattern and tyre make noted | ☐ Wheel bearings checked for play |
| ☐ Sidewalls checked for cracking | ☐ Discs and pads checked front and rear |

ENGINE, FLUIDS AND EXHAUST

- | | |
|---|--|
| ☐ Started from cold where possible | ☐ Coolant level and colour checked |
| ☐ First few seconds listened to | ☐ Cases and hoses checked for weeping |
| ☐ Oil level and condition checked | ☐ Exhaust checked for blowing joints |

ELECTRICS AND PAPERWORK

- | | |
|---|---|
| ☐ All lights and indicators tried | ☐ Wiring checked for added connectors |
| ☐ Horn and switchgear tried | ☐ Battery terminals and mounting checked |
| ☐ Warning lights watched at ignition | ☐ Registration, records and keys seen |

FAULTS FOUND AND WHAT THEY MIGHT COST your own quotes, not ours

Fault found	Part or labour	Who quoted	Estimated cost

Caravan and Motorhome Pre-Purchase Check

Look at the habitation side of a caravan or motorhome in the same order every time, and leave with the damp readings written down rather than a feeling that it seemed dry.

The habitation side of a caravan or motorhome viewing — damp, seals, gas, water, electrics and the chassis — with a table for your own damp meter readings, corner by corner.

YOUR METER, YOUR FIGURES

No damp percentages, tyre age limits or service intervals are printed here. What counts as a wet wall depends on your meter, the wall construction and who is reading it, so write the number your meter gave and compare it with the maker's guidance or a habitation engineer's opinion. A motorhome's engine and cab are a car: use the Used Car Pre-Purchase Inspection Sheet for that half.

Make, model and layout	Year	Berths	Asking price
Chassis / VIN number	Registration / plate	Seller and where seen	

DAMP READINGS

your meter, one row per point tested

Where tested	Reading	Feel / look	Seller's explanation	Concern?
front corners, rear corners, under windows, shower...				

OUTSIDE — BODY AND SEALS

- | | |
|--|--|
| ☐ Panels sighted along for ripples or bulging | ☐ Panels tapped low down and at the corners |
| ☐ Roof joints and awning rail sealant checked | ☐ Locker and door seals and alignment checked |
| ☐ Every window and rooflight seal pressed | ☐ Underside checked for hanging insulation |

CHASSIS AND RUNNING GEAR

- | | |
|--|--|
| ☐ Hitch head, breakaway cable and handbrake tried | ☐ Chassis checked for rust or fresh underseal |
| ☐ Jockey wheel and corner steadies wound | ☐ Road lights and indicators all tried |
| ☐ Tyre date codes read; sidewalls checked | ☐ Chassis number matched to the paperwork |

INSIDE — DAMP AND STRUCTURE

- | | |
|---|--|
| ☐ Every corner and window surround metered | ☐ Smell noted on first opening the door |
| ☐ Locker floors and wardrobe floor metered | ☐ Behind the shower and under seats checked |
| ☐ Floor walked for soft spots and creaks | ☐ Previous damp reports read, with readings |
| ☐ Walls and ceiling checked for staining | ☐ Habitation service records read |

GAS, WATER AND HEATING

- | | |
|--|--|
| ☐ Gas locker drop-out vent and regulator seen | ☐ Underside watched for drips while running |
| ☐ Hob, oven, grill and fridge lit on gas | ☐ Toilet cassette and seals checked |
| ☐ Pump run and every tap tried | ☐ Heater and water heater run on each fuel |

ELECTRICS, SAFETY AND EXTRAS

- | | |
|---|---|
| ☐ Mains hook-up connected and sockets tested | ☐ CO and smoke alarms present and tested |
| ☐ Leisure battery date and terminals checked | ☐ Fire extinguisher present and in date |
| ☐ Fridge tried on each supply | ☐ Handbook and appliance manuals present |
| ☐ Solar, inverter or mover demonstrated | ☐ A key for every lock, and the spares |

Classic and Project Car Buying Checklist

Compare a car in boxes with one that runs on the same footing, by writing down what is there, what is not, and what each gap will cost you to close.

Viewing a classic, a restoration or an unfinished project — what is original, what is missing, what has been done and what still needs doing — as a list you can price up at home.

THE CLUB KNOWS THE MODEL; YOU KNOW YOUR BUDGET

This sheet does not say what a given model is worth, which parts are correct or how much rust is too much. Those come from the owners' club, the marque specialist and your own budget. It records what you saw so that a car in pieces can be compared honestly with one that runs.

Make, model and year	Chassis / VIN	Engine no.
Described as	Runs and drives?	Asking price
		Seller

IDENTITY AND HISTORY

- ☐ Chassis, body and engine numbers found, read and compared with the paperwork
- ☐ Numbers compared with what the club or specialist says is right for the year
- ☐ Ownership chain and any gap in the history noted
- ☐ Photographs of the restoration seen, and the dates on them
- ☐ Receipts for parts and work seen, and who did the work
- ☐ Registration document read for the colour, engine size and body type recorded

STRUCTURE AND CORROSION

- ☐ Sills, floors, chassis rails and jacking points probed, not just looked at
- ☐ Inner wings, boot floor, spare wheel well and bulkhead checked
- ☐ Door bottoms, wheel arches and valances checked for filler with a magnet
- ☐ Previous repairs looked at for plating over rust rather than cutting it out
- ☐ Fresh underseal or paint in odd places noted as a question, not an answer
- ☐ Panel gaps, door shuts and boot and bonnet fit checked for a twisted shell

MECHANICAL

- ☐ Engine started from cold if it runs; smoke, noises and leaks noted
- ☐ Gearbox, clutch and back axle tried or turned over by hand
- ☐ Brakes, steering and suspension checked for seizure and play
- ☐ Fuel tank, lines and carburettor or injection checked for condition
- ☐ Electrics: wiring condition, loom repairs, earths and the charging system

COMPLETENESS

- ☐ Boxes of parts opened and roughly inventoried, not taken on trust
- ☐ Trim, brightwork, glass, badges and lights checked for presence and condition
- ☐ Hard-to-find items for this model identified and looked for specifically
- ☐ Non-original parts noted, with whether originals are obtainable

WHAT IS MISSING OR STILL TO DO one row per item — price it at home

Item or job	Present?	Condition	Where to source	Your estimate

Van and Commercial Pre-Purchase Inspection

Inspect a working vehicle for the wear a working life leaves, in the places a car checklist never looks, and leave with the plated weights written down.

A working vehicle looked at as one — load area, doors, racking, bulkhead, tow gear and plated weights alongside the mechanical walk-round — with a faults-and-costs table at the end.

READ THE PLATE, NOT THIS SHEET

A van has usually earned its living, and the wear is in different places from a car: the floor, the door runners, the clutch and the rear suspension. No load limits, tyre ratings or mileage expectations are printed here — read the plated figures off the vehicle and check them against what you need to carry, and check the rules where you are for anything to do with weights and licences.

Make, model and body	Year	Odometer	Asking price
VIN / chassis	Registration / plate	Plated weights (from plate)	Previous use

LOAD AREA AND BODY

- ☐ Floor lifted or probed at the edges for rot, rust or a soft patch under lining
- ☐ Ply lining, racking and shelving checked for how it is fixed, and what is behind it
- ☐ Tie-down points, load rails and any tail-lift or crane tried
- ☐ Rear and side doors run on their tracks, latched and locked, seals checked
- ☐ Roof, roof rack and any roof-mounted gear checked for leaks and fixings
- ☐ Bulkhead present, secure and undamaged; signwriting removal marks noted
- ☐ Body: dents, rubbed corners, previous accident repair and door alignment

WEIGHTS, TOWING AND EQUIPMENT

- ☐ Plate found and every weight written down in the box above
- ☐ Tow bar, electrics and any trailer socket tried; wear on the ball noted
- ☐ Tachograph, telematics box, speed limiter or camera fitted: noted and status
- ☐ Beacons, reversing sensors, alarm and any extras demonstrated
- ☐ Overall height and length noted against where it will be parked or garaged

RUNNING GEAR AND MECHANICALS

- ☐ Cold start, smoke and noises noted; engine bay looked at for leaks
- ☐ Clutch bite point, gear change and any drivetrain vibration on the drive
- ☐ Rear springs and dampers checked for sag, cracks and uneven ride height
- ☐ Tyres: wear pattern, sidewall marks and matching across each axle
- ☐ Brakes and steering tried loaded if possible, and the handbrake on a slope
- ☐ Underside: chassis, cross-members, exhaust and fuel tank for corrosion

CAB AND PAPERWORK

- ☐ Seats, seat belts, mirrors, heater and every switch tried
- ☐ Warning lights watched at ignition; any that stay on noted
- ☐ Service history, test certificate and plating certificate seen
- ☐ Keys, locking wheel nut, spare, jack and any fitted equipment listed

FAULTS FOUND AND WHAT THEY MIGHT COST your estimate, or a quote

Fault	Where	Serious?	Who quoted / source	Your estimate

Import and Registration Document Checklist

Keep track of a stack of paperwork moving between customs, test stations and the registration office, so a missing original is found before the appointment rather than at it.

Every document an imported vehicle needs on its way to a registration in your name — gathered, checked and tracked through each office, so nothing is missing on the day it is due.

THE OFFICIAL LIST, TRACKED HERE

Which documents are needed, which tests apply and which offices are involved are set by the country you are importing into, and change. Nothing here says what those are. Get the list from the official source where you are, write each item in below, and use this sheet to keep track of where every paper is.

Vehicle	VIN / chassis number	Country of origin
Importing into	Arrived on	Agent or shipper
		Your reference

DOCUMENTS one row per item on the official list where you are

Document	Needed for	Have it?	Original / copy	Issued by	Where it is
title, export cert., invoice, bill of lading...	customs, test, registration, i...				

STEPS AND OFFICES each stage, who handles it and the reference they gave

Notes — who you spoke to, what they asked for, and when

Part Exchange and Valuation Comparison

Tell the highest offer and the best offer apart by writing down what each one actually includes, not just the number quoted.

Offers for the same vehicle from several buyers, written down side by side with what each one actually includes, so the highest number and the best deal can be told apart.

THE NUMBER IS NOT THE WHOLE OFFER

Offers are rarely like for like. One may be a firm price, another subject to an inspection; one may collect, another may want the vehicle driven to them; a part-exchange figure only means something next to the price of the car you are buying. Record the conditions, not just the number.

Vehicle offered

Registration / plate

Odometer at time of offers

OFFERS RECEIVED

	dealer, buyer, trade site...	part-ex, outright, auction		inspection, paperwork...		who moves it

WHAT EACH OFFER INCLUDES the conditions that change what it is worth

Who made it	Admin or fees	Settles finance?	Paid when	Notes on the offer

This page is intentionally blank.

Trade-In Appraisal Sheet

Give every part-exchange the same walk-round and leave a record on file that shows how the offer was arrived at, whoever did the appraisal.

A dealer's walk-round of a customer's part-exchange — panel by panel, then tyres, mechanicals and paperwork — ending in the reconditioning estimate and the figure offered.

YOUR VALUATION SOURCE, YOUR RATES

No guide prices, condition grades or reconditioning rates are printed here. Write in the figure from whichever valuation source your business uses, your own workshop's cost for each repair, and the offer you made. The sheet is the record that supports the number, for the file and for the customer.

MECHANICAL, WARNING LIGHTS AND PAPERWORK

- | | |
|---|--|
| ☐ Started and warning lights watched | ☐ Test certificate and expiry seen |
| ☐ Driven, or reason it was not | ☐ Finance outstanding? (customer asked) |
| ☐ Fluid levels and leaks looked at | ☐ Locking wheel nut and spare present |
| ☐ Service history checked and gaps noted | ☐ Accessories and extras listed |

APPRAISAL SUMMARY

Guide figure	Valuation source	Total reconditioning	Offer made	Valid until
--------------	------------------	----------------------	------------	-------------

Notes — what the customer was told, and anything to check before the deal is done

Vehicle Advert Details Worksheet

Answer every question a buyer asks once, on paper, instead of going back out to the car each time the phone rings.

Everything a buyer will ask, gathered in one go before you write the advert — spec, history, extras, faults you are declaring and the photographs you have taken.

GATHER IT ONCE, ANSWER IT ONCE

Fill this in with the vehicle in front of you and the paperwork in your hand. An advert written from memory is where the awkward phone calls come from, and the faults you write down here are the ones you will not have to explain on the driveway.

Make and model	Registration / plate	Year
Trim or variant	Odometer reading	Fuel or power
		Gearbox

SPECIFICATION AND CONDITION the answers you will be asked for

Detail	What it is	Where the answer came from
colour, doors, engine size, drive...		log book, service book, rating plate, your own measure...

HISTORY AND EXTRAS

Item	Have it?	Detail to put in the advert
service history, test, keys, extras, tow bar...	yes / no / partial	

FAULTS YOU ARE DECLARING write them down before someone finds them

Fault or mark	Where on the vehicle	How you will word it

| ☐ Both sides, full length | ☐ Dashboard with ignition on | ☐ Each declared fault, close up |
| ☐ Interior — front seats | ☐ Odometer reading | ☐ Paperwork laid out |

Vehicle Sale and Handover Record

Leave both sides holding the same written account of a private sale, including the odometer reading and exactly what changed hands.

A plain record of a private sale between two people: who, which vehicle, when, for how much, what changed hands, and both signatures.

A RECORD, NOT A CONTRACT

A record of what happened, not a contract, and not legal advice. What a seller has to declare and how ownership transfers differ from place to place — check the rules where you are, and use the official transfer process too.

THE VEHICLE

Make and model		VIN / chassis number	Registration / plate

Vehicle Collection and Drive-Home Checklist

Turn the excited, slightly rushed hour of collecting a vehicle into a list, so the second key, the locking wheel nut and the cover start time are all dealt with before you drive off.

The day you collect the vehicle you have bought — what to have arranged before you leave home, what to count and check at the handover, and what to do on the first drive and once it is home.

CHECK THE RULES WHERE YOU ARE

What has to be in place before a vehicle is driven — cover, tax, registration, plates — differs from country to country and changes, so check the rules where you are and use the official process. This sheet is the list of what you need to have sorted and what to check, not a statement of what the law requires.

Vehicle	Collecting from	Date
Odometer at handover	Fuel / charge at handover	Keys received
		Agreed price paid

BEFORE YOU LEAVE HOME

- ☐ Cover arranged to start from the collection time, with confirmation in hand
- ☐ Whatever registration or road tax step applies where you are is done or ready
- ☐ Payment method agreed with the seller, and a receipt or the sale record ready
- ☐ Breakdown cover checked for whether it covers a vehicle you have just bought
- ☐ Your own ID and the seller's details to hand; a lift or return ticket arranged

AT THE HANDOVER

- ☐ VIN and registration checked against the paperwork one more time
- ☐ Every key counted, including any fob, locking wheel nut key and spare
- ☐ Documents handed over listed on the Vehicle Sale and Handover Record
- ☐ Manuals, service book, charging cable, tools, jack and spare present
- ☐ Odometer and fuel level written in above and photographed
- ☐ Walked round once more for new damage since you viewed it
- ☐ Seller shows you anything unusual: alarm, immobiliser, quirks, a stiff lock

BEFORE YOU PULL AWAY

- ☐ Seat, mirrors, wipers, lights and demister found and set before moving
- ☐ Warning lights watched at ignition and any that stay on noted
- ☐ Tyre pressures set to the handbook figure, or checked at the first stop
- ☐ Route home planned with a place to stop after a few miles

THE DRIVE HOME AND AFTER

- ☐ Stopped early: bonnet lifted, underneath glanced at for drips, temperature watched
- ☐ Noises, smells, pulling and gear changes noted while they are fresh
- ☐ Fuelled or charged before it becomes a worry; the first receipt kept
- ☐ At home: odometer recorded, photographs taken, paperwork filed
- ☐ Faults noticed on the way listed below and raised with the seller promptly
- ☐ Service, test date and any recall check booked in the diary

FAULTS NOTICED ON THE DAY raise them with the seller while they are fresh

What you noticed	When / where	Raised on	Seller's answer

05

SECTION 05

Running costs

WHAT GOES HERE

Fuel, mileage, charging, tolls and parking, and hire or loan.

IN THIS SECTION 5 sheets, 5 pages

GF-01	Fuel and MPG Log	118
GF-02	Vehicle Mileage Log	119
GF-09	EV Charging Cost Log	120
GF-08	Toll and Parking Expense Log	121
GF-10	Vehicle Hire and Loan Record	122

Right-hand figure: the binder page the sheet starts on.

05

This page is intentionally blank.

Fuel and MPG Log

See what a vehicle actually costs to run and spot a change in fuel consumption early, which is often the first sign that something mechanical is wrong.

Every fill on one line with the odometer beside it, so distance and consumption can be worked out from the sheet itself. A change in consumption is often the first sign of a mechanical problem.

DECLARE YOUR UNITS, THEN KEEP TO THEM

No units are printed anywhere on this sheet, and no consumption figures either. Write at the top which units the odometer reads in, which you buy fuel in, and how you want consumption expressed — then keep to them, because a column of numbers in mixed units records nothing. Fill to the same point every time and read the odometer at the pump: brim to brim is what makes one line comparable with the next.

Vehicle	Registration	Odometer reads in	Fuel bought in	Consumption recorded as
---------	--------------	-------------------	----------------	-------------------------

FILLS one line per fill, in order, with no gaps

[illegible]

Vehicle Mileage Log

Keep a contemporaneous mileage record in the vehicle, which is the kind that stands up, rather than one reconstructed at the year end.

Journey by journey — date, purpose, start and end odometer — with business and private kept apart.

NO RATES PRINTED — CHECK YOUR OWN AUTHORITY

No mileage rates are printed on this sheet. Rates are set by tax authorities, differ by country and vehicle, and change from year to year. Whether a journey counts as business, what records you must keep and for how long are also questions for your own tax authority or accountant, not for a printable.

HOW TO USE THIS SHEET

- 1 Fill it in in the vehicle, at the end of the journey. A log reconstructed at the year end is the one that gets challenged.
- 2 Record the purpose in enough detail that it means something to somebody else in two years: who you saw, not just 'meeting'.
- 3 Note the odometer at the start and end of the period as well, so the total can be reconciled.

EV Charging Cost Log

Build a real picture of what an electric vehicle costs to run, and show the gap between home and public charging in your own figures.

Every charge for an electric or plug-in vehicle — where it was charged, how much energy went in, what it cost, and the odometer at the time.

YOUR TARIFF, YOUR READINGS

No price per unit and no expected range are printed here. Home and public charging cost different amounts, tariffs change, and what a vehicle returns depends on the load, the weather and the driver — record your own figures and the pattern will show itself over a few months.

Vehicle

Battery / model

Driver

Period

CHARGING RECORD

Date	Vehicle	Charger & location	Home / public	kWh added	Cost	Odometer	Notes
		operator, site, bay		from the unit		reading	

Toll and Parking Expense Log

Capture the road costs that never reach the fuel log, so an expense claim can be assembled from a record rather than from a pocketful of tickets.

The costs that never appear on a fuel receipt — tolls, congestion and clean-air charges, parking and ferries — logged per vehicle with the receipt tracked and the job it belongs to.

SEPARATE FROM THE FUEL LOG ON PURPOSE

Keep this alongside the fuel log rather than inside it. Mixing a car park ticket in with litres and odometer readings makes the consumption figures harder to read and the expense claim harder to assemble.

Vehicle / fleet

Period covered

Kept by

EXPENSE RECORD

Date	Vehicle	Driver	Where	What for	Amount	Receipt	Recharged to
			road, crossing, car park	toll, parking...		held? Y/N	job or customer

Vehicle Hire and Loan Record

Settle the awkward conversation before it happens, by recording the odometer, the fuel and the condition with both people present at handover and return.

A vehicle handed to somebody else — hired out, loaned to a colleague or lent to another site — with the odometer and fuel at both ends and a signature on return.

COMPLETE THE ROW AT THE HANDOVER

Fill the row out at handover and finish it in front of whoever brings the vehicle back. A condition note written after the fact, with nobody there to agree it, settles nothing.

Vehicle / fleet

Right-hand figure: the binder page the sheet starts on.

06

This page is intentionally blank.

Tool and Equipment Inventory

Get every tool you own onto one register with its serial number, so a theft, a fire or a claim starts from a list instead of from memory.

Every tool and machine you own on one register — make, model, serial number, what it cost and where it is kept. This is the sheet you need after a break-in, and the one you will be asked for when you claim.

SERIAL NUMBERS, AND A COPY KEPT OFF SITE

A serial number is the only thing that makes a stolen tool identifiably yours. Photograph each rating plate as you work round the shop, and keep a filled-in copy of this sheet somewhere other than the building it describes.

Owner / business	Premises	Date compiled
Compiled by	Sheet no.	Copy kept where

INVENTORY one line per item — number them and mark the numbers on the tools

Workshop Equipment Service Log

Keep a per-machine service history for fixed workshop equipment, so the consumable part numbers and the last service date live with the machine.

One machine, one sheet. Servicing, running hours, parts fitted and who did the work — for a lathe, a saw bench, a welder, a dust extractor or anything else bolted to the workshop floor.

SERVICE AND MAINTENANCE RECORD

Date	Hours	Work carried out	Parts fitted	Cost	By

Equipment Loan Register

Know who has what and when it was due back, and record the condition an item was in when it came home rather than discovering it at the next job.

Who has what, when it was due back, and what condition it came back in. Kept by the door of the store, it is the difference between a tool that is lent and a tool that is gone.

NUMBER THE ITEM, NOT JUST THE TYPE

Write the item's own ID or asset number, not just its name. Two identical drills are indistinguishable a month later, and 'the drill' is not a record. The column that earns its keep is the last one — condition when it came back.

Business / department

Register kept by

Sheet no.

LOAN REGISTER one line per loan · rule it off when the item comes back

Date out	Item	ID no.	Borrowed by	Due back	Returned	Condition on return	Signed

Consumables and Shop Supplies Inventory

Turn reordering from a guess into a decision, by recording the level you have chosen to hold against what is actually on the shelf.

What the workshop actually holds of the things that run out — abrasives, fixings, welding consumables, oils, gloves — against the level you have decided to keep.

PAR LEVEL FIRST, COUNT SECOND

Set a par level once and the count becomes a decision rather than a guess. The point of the reorder column is that it is filled in while you are standing at the shelf, not from memory at the supplier's counter.

Workshop or store				Counted by			Date		
Item	Size or spec	Unit	Par	Counted	Reorder	On order	Supplier	Part number	Location
