

Bearded Dragon Care Record

Keep the daily record for a species where the commonest serious illness comes directly from husbandry figures being wrong.

Feeding, supplements, weight, basking readings and brumation — the things that go wrong slowly.

GET THE FIGURES FROM A VET, NOT A PRINTABLE

No temperatures, UVB figures, supplement schedules or feeding quantities are printed. Metabolic bone disease is the commonest avoidable illness in this species and it comes from exactly these figures being wrong. Get them from an exotics vet or a species-specific guide and write them at the top.
