

Body Condition Score Record

Record condition scores consistently over a year, so changes are visible at the points in the cycle where they matter.

Condition scored at intervals you choose, on the scale you use, for whatever species you keep.

NAME YOUR SCALE BEFORE YOU START

No scoring scale is printed on this sheet and none is implied. Condition scoring runs on different scales for cattle, sheep, goats, pigs and horses, and the same species is scored differently in different countries. Write down which scale you are using at the top, then use only that one — a record that mixes scales is worse than no record.

HOW TO USE THIS SHEET

- 1 Score by hand, in the same places, every time. Eye alone is not scoring.
- 2 Have the same person score where you can, or accept that two scorers will differ by half a point.
- 3 Score at the points in the year that matter for your system, and write down what those are.

Holding _____ Species or group _____ Scale used, and its source _____

Scored by _____ Year _____ Sheet _____
