

Chick Growth and Brooder Record

Record the brooder weeks, where most losses happen and where nobody keeps notes.

The brooder weeks — temperature as you set it, weights, losses and the move to the coop.

WATCH THE CHICKS, RECORD THE NUMBER

Brooder temperatures are set by the species, the breed and the birds' own behaviour, and none are printed here. Watch the chicks rather than the thermometer: where they sit tells you more than any printed figure could.

Hatch or batch

Species and breed

Number started

Date

Date	Day or week	Brooder temp you set	Birds alive	Losses	Sample weight	Feed and water	Behaviour and notes

Moved to coop on

Number moved
