

Compost and Soil Record

Know which heap is ready and what has already been spread where, instead of guessing at both every spring.

Two records that belong together: what went into each heap and when it was turned, and what each bed has been tested at and had added to it since.

YOUR FIGURES, NOT OURS

No target figures are printed here. What counts as a good pH, and how much of any improver to spread, depends on the crop, the soil and the test you used — take those from the kit's own instructions or from growing guidance for your area. This sheet records what you measured and what you applied.

Garden, plot or allotment

Year

COMPOST HEAPS AND BINS

a new line each time a heap or bin is started

Heap / bin	Started	What went in	Turned on	Ready	Used on

SOIL TESTS BY BED record the reading — the target is yours to look up

Date	Bed / area	pH reading	Condition and texture	Tested with	Notes

IMPROVERS, MULCHES AND AMENDMENTS APPLIED

Date	Bed / area	What was applied	How much	Notes
