

Egg Incubation and Hatch Record

Record one incubation properly so that a poor hatch can be diagnosed rather than shrugged at.

One incubation from setting to hatch — candling results, hatch rate and what the failures were.

YOUR MACHINE'S SETTINGS, IN THE HEADER

No incubation temperature, humidity or turning schedule is printed here. They differ by species and by machine, and your incubator's manual is the authority. Write your settings in the header so the results can be read against them.

Species and breed	Incubator	Set on	Due
Temperature you set	Humidity you set	Turning	Lockdown on

CANDLING

Date	Day	Eggs checked	Fertile	Clear	Early death	Removed	Notes

HATCH

Eggs set	Fertile	Hatched	Hatch rate	Assisted	Losses
----------	---------	---------	------------	----------	--------

What went wrong, what went right, and what to change
