

Track lay across a month so a drop shows up as a pattern, with the conditions that usually explain it recorded alongside.

Daily lay across the flock, month by month, so a drop shows up as a pattern rather than a feeling.

Lay rate falls for many reasons — daylight, moult, age, a fright, a parasite, a change of feed. This sheet records the fall; the cause is for you and, where needed, your vet. No expected rates are printed.
