

Equine Rehabilitation Record

Follow a prescribed rehabilitation programme exactly and record the response, so the vet's review is based on evidence rather than recollection.

A prescribed rehabilitation programme recorded day by day — what was asked for, what was done, and how the horse was afterwards.

THE VET'S PROGRAMME GOES IN THE BOX BELOW

This sheet contains no rehabilitation programme and prescribes nothing. Box rest, controlled exercise and any return to work must be set by the treating vet for that specific injury, and going beyond it because the horse seems fine is how injuries recur. Write the vet's instructions at the top and record against them.
