

Farrier Visit Record

Make the shoeing cycle visible, which is what stops a horse going three weeks over and losing a shoe in the mud.

Every visit — what was done to which feet, what it cost, and when the farrier wants to see the horse again.

YOUR FARRIER'S CYCLE, WRITTEN DOWN

No shoeing or trimming interval is printed. It depends on the horse, the work, the ground and the season, and your farrier sets it. What this sheet does is make the cycle visible, which is what stops a horse going three weeks over.
