

Fridge and Freezer Temperature Log

Show that an appliance was checked, twice a day, by someone who wrote down what they saw.

Twice-daily readings for a fridge and a freezer, with room to write what was done when a reading was not where it should have been.

WE DO NOT PRINT TARGET TEMPERATURES

No target temperature is printed on this sheet, deliberately. What your appliance should be running at comes from its own manufacturer's instructions; if you are keeping temperature records for a food business, it comes from the rules that apply where you trade. Write your own target in the box below and read every line against that.
