

Goat Health and Treatment Record

Keep a medicines record that answers what went into which goat and when the milk or meat is clear.

Treatments given, by whom, and the date each animal is clear — copied from the label every time.

EVERY FIGURE COMES FROM THE LABEL

No medicine, dose, route or withdrawal period is printed here and none ever will be. Those come from the product label and your vet, they differ between products and countries, and a wrong one could put milk or meat into the food chain. Recording requirements are also a legal matter in many countries — check what applies to you.
