

Habitat Cleaning and Maintenance Rota

Run the cleaning and equipment round across several enclosures without losing track of which was done when.

Spot cleans, deep cleans, substrate changes and equipment checks across every enclosure you keep.

HOUSEHOLD DISINFECTANT IS NOT AUTOMATICALLY SAFE

Disinfectants that are safe for a kitchen are not necessarily safe around reptiles, amphibians or birds, and residues matter. Use a product intended for the species, at its own dilution, and rinse as the label says.

Keeper		Enclosures covered				Product used and dilution		
Date	Enclosure	Spot clean	Full clean	Substrate changed	Water changed	Equipment checked	By	Notes

EQUIPMENT WORTH CHECKING EVERY TIME

- ☐ Thermostat working and probe positioned correctly
- ☐ Heat source guarded and secure
- ☐ UVB in date and unobstructed
- ☐ Lids, locks and gaps — escapes happen through the ones you dismissed
- ☐ Water dishes clean and reachable
- ☐ Backup heat source available in case of failure
