

Harvest Weight Tally Sheet

Turn a season of odd handfuls and full trugs into one running total per crop, so next year's planting is decided by what the plot produced rather than by memory.

A running tally of what actually came off the plot — crop, date, weight or count, and where it went. The season's total is the line nobody can remember by November.

WRITE YOUR UNIT AT THE TOP AND KEEP TO IT

This sheet is unit-neutral: no weights and no units are printed on it. Decide what you are counting in — kilograms, pounds, grams, ounces, punnets, trugs or simply number of fruit — write it at the top, and keep to it all season. A running total made of mixed units tells you nothing.
