

Hay, Straw and Forage Stock Record

Know in October whether the forage will last until spring, instead of finding out in February when everyone else has sold theirs.

Bales in, bales used, and the week you find out you are going to run short.

COUNT IN AUTUMN, NOT IN FEBRUARY
Running out of forage in February is a planning failure that shows up in October if anybody is counting. This sheet counts. It sets no requirement per animal — that depends on species, weather and how much grazing you have.
