

Hot Work Permit

Control work that makes heat, flame or sparks, and record the after-check that catches the fire that starts once everyone has gone home.

A permit for work that makes heat, flame or sparks — with the fire watch, the clearing and the after-check recorded.

THE AFTER-CHECK IS THE POINT

Fires from hot work usually start after the work has stopped, which is why the after-check is on this permit. How long that watch should last is set by your own assessment and local rules, not by this sheet. Who may authorise and carry out this work, what training and certification they need, what must be recorded and how long it must be kept differ by country and by workplace. This sheet names no scheme, sets no criteria and satisfies no regulation on its own — check what applies where you are.
