

Jewellery and Watch Inventory

Record identifying detail and paperwork for each piece before it is needed, which is invariably after something has gone.

Piece by piece — metal, stones, marks, serial numbers and where the paperwork is — recorded before anybody needs it.

WE RECORD VALUATIONS, WE DO NOT MAKE THEM

No values, carat weights or authentication guidance are printed here and none are implied. A valuation is a professional's opinion on a date. Insurers set their own requirements, often including a recent valuation and photographs, so ask yours what they want.

HOW TO USE THIS SHEET

- 1
- Photograph every piece against a plain background with a ruler in shot, and record the filename here.
- 2
- Copy hallmarks and serial numbers exactly, including anything you cannot read — note that you could not read it.
- 3
- Record where the box, papers and receipt are. For watches, the papers are a large part of the value.
- 4
- Keep this sheet somewhere other than with the jewellery.
