

Poultry Parasite and Treatment Record

Record treatments with the two withdrawal dates that matter, so eggs and meat are not used before they are clear.

What was treated, with what, and the date the eggs or meat are clear — taken from the label.

EGG AND MEAT WITHDRAWALS ARE DIFFERENT — READ BOTH

No product, dose or withdrawal period is printed here. Withdrawal for eggs and for meat are often different, both are on the label, and getting them from anywhere else is how contaminated food enters the chain. In many countries these records are a legal requirement with a set retention period.
