

Spray and Fertiliser Application Record

Record applications properly at the time, including the conditions, so the record stands up when a buyer, an inspector or a neighbour asks about it.

Field by field: what was applied, at what rate, in what conditions and by whom.

THE LABEL IS THE AUTHORITY, NOT THIS SHEET

No product, rate, buffer or harvest interval is printed here. They are on the label, they differ by product and country, and applying a figure from a website instead of the label is how people get it wrong. Record what the label said and what you actually did.

HOW TO USE THIS SHEET

- 1 Record the weather at the time of application, not the forecast. Wind, temperature and rain afterwards are the first things anybody asks about later.
- 2 Write the harvest or grazing interval from the label, then the date it ends.
- 3 Note who applied it and what certification they hold — required in many countries, and worth recording everywhere.
