

Tarantula and Invertebrate Record

Record feeding and moult cycles so that a long fast can be recognised as normal for your animal rather than worried about.

Feeding, moults, rehousing and the long quiet periods that worry new keepers.

YOUR OWN RECORD IS WHAT TELLS YOU IT IS NORMAL

No feeding frequencies, humidity figures or moult intervals are printed — they differ enormously between species and life stages. Recording the dates is what tells you a fast is normal for your animal rather than a problem.

Species		ID or name			Acquired		Enclosure	
Date	Offered	Taken	Refused since	Water topped	Premoult signs	Moulted	Rehoused	Notes

Moult dates, sizes and anything unusual
