

Terrarium and Bioactive Setup Record

Record what actually went into a bioactive build, so that a problem months later can be traced to a decision rather than guessed at.

What went into the build, what has been changed since, and how the clean-up crew is doing.

RECORD THE BUILD; IT EXPLAINS THE YEAR

A bioactive setup is a small ecosystem and it takes months to settle. Recording what you put in, and when, is what lets you work out later why something is or is not working. No species, ratios or depths are recommended.
