

Vivarium Temperature and Humidity Log

Build a record of what the enclosure is actually doing across a day and a season, rather than the one reading you happened to glance at.

Twice-daily readings at animal level, against the target you set, with the equipment that produced them recorded.

MEASURE AT THE ANIMAL, NOT AT THE GLASS

No target figures are printed. What this sheet insists on instead is that you write down where yours came from and what you measured with — a dial thermometer stuck to the glass and a probe at basking height will disagree by a great deal, and only one of them is telling you about the animal.
