

Water Trough and Supply Check

Record the water round, which is the one daily job where a missed fault becomes an emergency within hours.

Troughs checked, faults found, and the freeze that somebody has to break every morning.

WATER IS THE ONE THAT CANNOT WAIT

Stock can be without feed for a while. Water is different, and a failed ballcock in July is an emergency by the afternoon. This is a round, not a specification — no volumes or requirements are printed.
